PROJECTS

SHARDS OF AGONY

It is a website developed using Python Django web framework for my friend's Rock Band, user how wish to book the band can fill out the booking form or contact form and data would be stored and mailed to Shards of Agony team.

The band can add their own songs to the site from Django Admin panel itself and it would be fetched from database and displayed in front-end.

TODO APP

TODO website developed using Python Django and DjangoRestFramework helps users keep track of their day to day tasks. ToDo tasks added by user gets stored in database and fetched and displayed in front-end. It has complete API integration Authentication and all ToDo functionality, so that a mobile client or other application can make use of it.

Users can either press completed once and that todo item moves to completed section or choose to delete. The website also has dark mode feature.

SS REAL ESTATE

It is real estate website developed with Django. The site show house listing based on filtered location, price, number of bedrooms.

Interested customers can make an enquiry and the designated realtor will get an email and contact the customer back.

MY PORTFOLIO WEBSITE

I have developed my portfolio website using Django web framework, portfolio site shows my work in more detail.

Interested recruiters can reach out to me from contact page which gets stored in database. I have built model for projects as well, so that I can add any new project to the site from admin area which then gets fetched and displayed in projects sections and no need of any code changes.
